## 注意事项 Remarks

- 当待测电流从传感器原边过流孔流过，即可在输出端测得电流大小。(注意：错误的接线可能导致传感器损坏)

When the current will be measured goes through a sensor, the current will be measured at the output end.  
(Note: The false wiring may result in the damage of the sensor).

- 当导体完全充满原边过流孔时动态表现 (di/dt 和响应时间) 为最佳。

Dynamic performances (di/dt and response time) are best with a single bar completely filling the primary hole.

- 原边过流孔内导体温度不应超过100°C。

Temperature of the primary conductor should not exceed 100°C.
